

AI-Powered Multimodal Churn Prediction & Sentiment Dashboard

Enterprise Control Panel (EvoBoost Classification + Advanced NLP Aspect Mappings)

 Executive Analytics Matrix

 Agentic Remediation Center

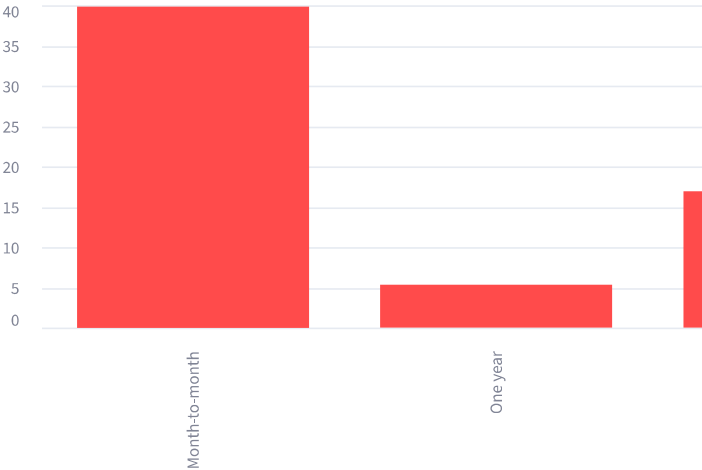

Deep Data Exploration & Predictive Signals

Macro-level overview of correlation variables, feature weights, and user sentiment drivers.

Total Monitored Directory Space	Calculated Model Churn Rate	Monthly Revenue At Risk	Global Frustration Baseline
400 Accounts	28.0%	\$9,507.97	3.9%
	↓ -2.4% vs Last Quarter	↑ Critical Target Set	

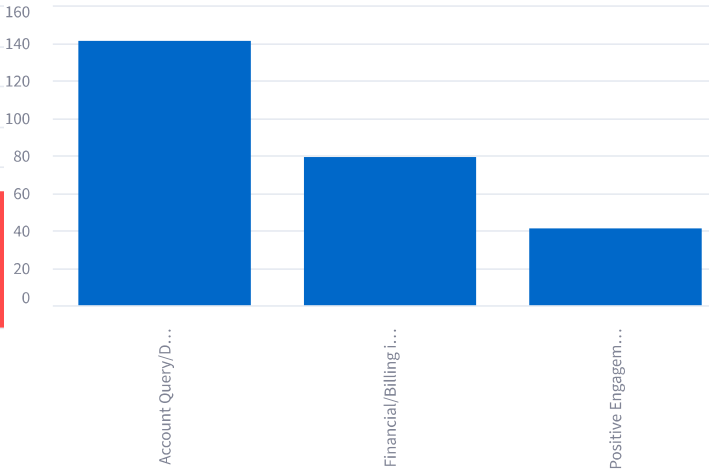

Churn Rate Dynamics by Contract Class

Insight: Short term Month-to-month contracts represent the highest density churn threat space.

Support Aspect Categorization Volume

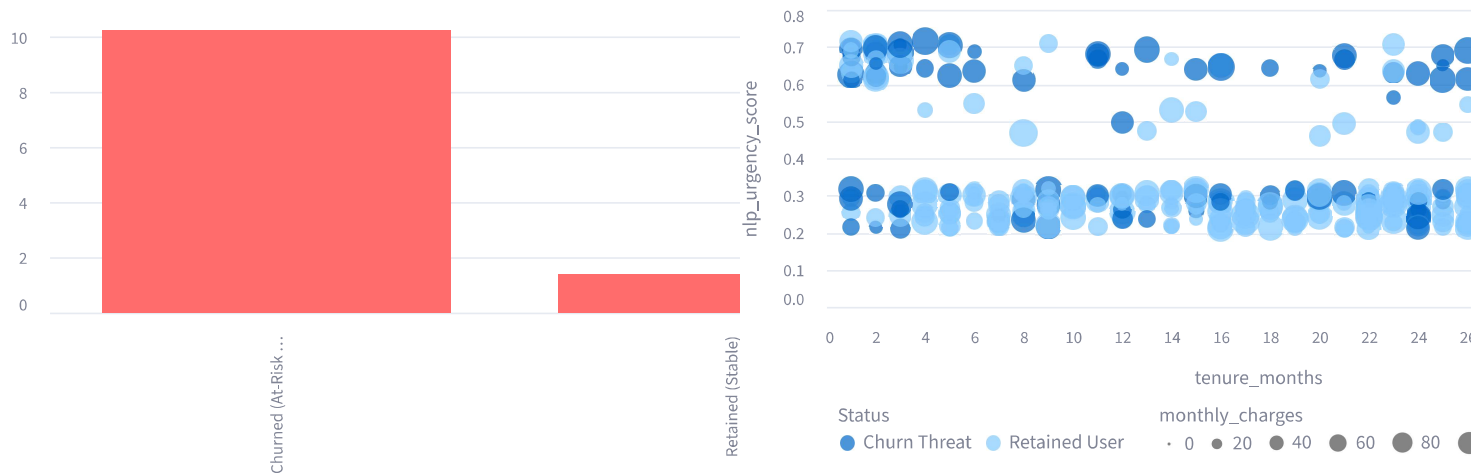

Insight: Structural categorization derived completely offline using zero-shot semantic matching maps.

Sentiment Intensity Profiles: At-Risk vs Retained Cohorts

-  Mean Customer Frustration Levels by User Status
-  Continuous Escalation Urgency Score Matrix Profile

Plot Interpretation: Higher cluster distribution coordinates represent critical system intervention zones (Short tenure, high financial footprints, and severe linguistic urgency metrics).
